ALEX BUSMAN

6502 INSTRUCTION SET

PROGRAMMING MODEL

STACK AND MEMORY LAYOUT

INTERRUPT VECTOR LOCATIONS

\$FFFE, \$FFFF IRQ/BRK: Interrupt Request or Break \$FFFC, \$FFFD RESET: Power-On (POR) or External Reset

\$FFFA, \$FFFB NMI: Non-maskable Interrupt

NOTATION USED IN INSTRUCTION SET SUMMARY

CPU Register Notation

Accumulator - A or a

Index Register X – X or x

Index Register Y – Y or y

Stack Pointer – SP, sp, or s

Program Counter – PC, pc, or p

Status Register/Condition Code Register – SR, CCR, c

Explanation of Italic Expressions in Source Form Column

opr8i – 8-bit immediate value

opr8a - 8-bit address used with zero page address mode

opr16a – 16-bit address value

oprx8 - Any integer in the range -128 ... +127

oprx16 – Any integer in the range -32,768 ... +65,535

xy - Index X or Index Y

Operators

+ - Addition

- - Subtraction

– Logical AND

+ - Logical OR (inclusive)

⊕ – Logical exclusive OR

: - Concatenate

→ Transfer

Address Mode Notation

ACC – Accumulator; no operands; operation performed on accumulator.

IMP – Implied; no operands in object code

IMM – Immediate; operand in object code

ZER - Zero Page; operand is the lower byte of an address from \$0000 to \$00FF

ABS – Absolute; operand is a 16-bit address

REL – Two's complement relative offset; for branch instructions

IDX1 - 8-bit signed offset from X or Y; 1 extension byte

IDX2 – 16-bit signed offset from X or Y; 2 extensions bytes

[IDX1] - Indexed-indirect; 8-bit offset from X or Y

Machine Coding

ee - High-order byte of a 16-bit constant offset for indexed addressing.

Low-order eight bits of an 8-bit signed constant offset for indexed addressing, or low-order byte of a 16-bit constant offset for indexed addressing.

hh - High-order byte of a 16-bit address.

ii – 8-bit immediate data value.

11 - Low-order byte of a 16-bit extended address.

- Signed relative offset \$80 (-128) to \$7F (+127). Offset relative to the byte following the relative offset byte.

ZZ – 8-bit zero page address \$0000 to \$00FF. (High byte assumed to be \$00).

Condition Codes Columns

Status bit not affected by operation.

0 - Status bit cleared by operation.

1 - Status bit set by operation.

 Δ – Status bit affected by operation.

INSTRUCTION SET SUMMARY
